

BrikWorld

A Rollplaying Game

1 Introduction

Imagine a fantasy RPG with its eyes open. A world whose narrative tropes not only exist independent of the actors that embody them, but are a well-documented and relied-upon force in their own right. A world locked in war over the right to exploit natural resources, often against the wishes and over the dead bodies of those resources. A world made almost entirely from ninterchangable plastic blocks. This world is BrikWorld.

1.1 BrikWorld from a Distance

Until a little more than six hundred years ago, BrikWorld was much like any other fantasy world. Heros and Magic and Dungeons and Dragons fought continually over control of the land, to the land's great detriment. Crisis after crisis ravaged the countryside and slaughtered the population, kept in check only by the occasional band of stalwart adventurers. The world teetered on the brink of extinction, kept from total darkness by tiny points of light. This was the age of the Wild.

Funnily enough, in the end all it took to spark a sea change was a casual observation by a young mage named Arnold Heisenbrik. In his words:

We are unable to determine at

this time where the death beetle infestation came from. There are no other entrances to the dungeon through which they may have come, and nothing to eat in there - until we excavated the single entrance. The only explanation that admits itself is that the death beetles must have come from *nowhere* and eaten *nothing* until our party offered itself to be feasted upon, an idea so ridiculous I am uncertain whether to even mention it.

Though Heisenbrik's Uncertain Principle was stated without the force of conjecture common to the time, it troubled other mages enough for them to verify it. And verify they did.

Within ten years, every major government was aware of the finding's implications - mages aren't any worse gossips than people generally are, but most are telepathic so news travels very fast. Fifty years after that, it was common knowledge in any nation worth writing fluff for.

The world is still reeling.

1.2 What to Expect from BrikWorld

BrikWorld is a hybrid of roleplaying games with miniature wargames, cherry-picking the best of both worlds to make a unified experience. As such, players from both

genres are likely to encounter some new, unfamiliar, or at least really strange-sounding ideas.

1.2.1 For Roleplayers

The first and most obvious difference you'll notice is squad-level control. Rather than pretending to be a single PC, you'll be controlling groups of them ranging in size from a handful of units to entire armies. While you are welcome to name and ascribe unique personalities and desires to each of them if you'd like, and doing so usually turns out pretty cool, it is certainly not necessary and absolutely not required. Naming your force as a whole and developing it along thematic lines are always good ideas though, so long as the name/theme isn't retarded.

As a player, you should never be required to roleplay in character. You are not your units, but the mystical, invisible being watching over them and guiding their actions in a manner which they would approve of. The decisions you make outside of combat reflect the combined will of your entire force, not the voices of only one or two. Their tiny lives are in your incorporeal hands. That said, a player might want to appoint one of her units as a "face," used principally for interaction with other groups, and speak mostly in character when strategizing. That's fine too. Just don't proposition other people's units. That could get a little weird.

Finally, don't get too attached to your

units. BrikWars is a dangerous combat system where every hit is the equivalent of a save or die spell. Although the chances of a TPK are low, any fight that's large enough to bother with will have at least a few casualties before it's won. If you're the kind of person who can't stand seeing a beloved character pass on, you may want to start stocking up on healing potions now. And try not to let other people know which mini is your favorite, just in case.

1.2.2 For Wargamers

Think of BrikWorld as a long campaign of small, easy battles, during which your force expands to meet a growing challenge. Completely losing a match is very unlikely, but it's easy to lose more units than the mission reward can replace. Over time sub-par performance can make battles more difficult, and therefore more costly. On the other hand, since the GM can and should somewhat tailor the enemy to your capabilities, army composition becomes less about optimum effectiveness and more about personal style.

As you play, you'll be expected to think with the mindset of your army. You don't have to pretend to be that army like it's some kind of improv theater, but try to make your decisions from their perspective. Pretend they're real people. Their loyalties are your loyalties. Are they grizzled veterans, too combat-weary to care about anything but their survival? Are they bright-eyed idealists ready to die for their town or nation? Are they raw

recruits, scared too shitless to do anything but catch bullets? They're your boys, so it's your choice.

Most battles will be fought against a GM, who is also the person who sets the reward for the current mission's performance and decides which later missions your force has access to. It may occur to you to wonder if there is a conflict of interest there. The answer is "yes, yes there is." The usual method for resolving GM disputes is to buy him pizza to make him fat and content and pray the issue never comes up to begin with.

Finally, although the GM might pit the players against each other if you make him angry enough, BrikWorld is largely a cooperative endeavor. You're expected to work *with* your fellow players to achieve goals for a common benefit, even if they're too dumb to deserve it. Especially if they're too dumb to deserve it, in fact, because standing back and letting them die will only make the next battle that much harder.

1.3 Why BrikWars?

Although any number of different wargaming mechanics might have been used to underpin our enterprise, we chose that of BrikWars for several of its more unique features:

- **Affordable.** Although the Lego miniatures that BrikWars was built to fight with are somewhat expensive, BrikWars itself is free, available at

<http://www.BrikWars.com>, and does not depend on specific miniatures of any brand at all.

- **Extensible.** BrikWars itself comes with its own advanced and self-contradictory set of rules, the 2001 rules, which are the product of half a decade of arguments, houserules and outright fistfights. It's generally accepted that you can pick and choose which rules you like the most - virtually no one uses the default rules without alteration. We'll suggest a small number of additional rules, but you're under no pressure to abide by them. Use house rules, or someone else's house rules, or Cider House rules, or O'Doyle Rules. Whatever floats your group's boat.
- **Flexible.** In the default 2005 rules everything is the product of a smallish number of generic creation guidelines, balanced around miniature size and a point buy (CP) system. If you get tired of minifig combat, play dragons vs. ogres, or use miniatures from another system - BrikWorld vs the Imperium of Man would make a damn fine campaign that practically writes itself.
- **Casual.** BrikWars is above all a relaxed gameplay experience. The only way to really play it wrong is to get upset at how the other people are playing. Unless they're cheating or something, in which case don't give them any more beer until they stop. That's another thing. You must have beer. Doing it sober is doing it wrong.

- **Alcohol.** There. It's official. And make sure someone brings donuts or pizza too.

2 The Brik World of BrikWorld

To properly appreciate the social development of BrikWorld, we will need to take a step back and examine the dual forces that underpin all of its conflicts: Life, and Loot. Before that, though, a quick run-through of BrikWorld's variety of nations.

2.1 The Seven Nations of BrikWorld

map of BrikWorld

- **Archipelago:** A seafaring nation located in the northwestern archipelago and coastal areas. While its islands are fairly safe, the seas surrounding them teem with all manner of fierce sea monsters. Beneath the waves, majestic temples and sunken ships wait in anticipation of bold adventurers. The people of Archipelago are a xenophobic predominately minifig bunch, mostly sailors and seaside villagers, who are willing and able to violently protect what they see as theirs (roughly speaking, this includes anything they

can get a boat to). Archipelago tends to produce excellent Wind mages. Uses Island and Pirate themed material.

- **WesternHighlandStan:** A nation of nomadic herders and hunters who inhabit the northern high plateau. Trolls have historically been overrepresented in WesternHighlandStan's population, a disparity which has increased with time. Highland Trolls prefer to fight from horseback when possible and are generally skilled bowmen, though no slouches with conventional swords either. WesternHighlandStan has had a long-standing feud with the dwarven fortresses of the SkyWall, but in recent years have become more hostile to everyone as a result of (and sparking) anti-troll hostility elsewhere. Uses Castle/Fantasy material, with an emphasis on trolls and horses.

- **SkyWall Mountain Federation:** The highest peaks of BrikWorld can be found in the SkyWall mountains, home to an eclectic mix of peoples united more by sheer bloody-mindedness than anything else. The lower slopes and peaks of the SkyWall house countless dwarven fortresses whose citizens dig ever downward for precious metals and gems, invariably unearthing hostile residents in the process. Higher elevations sport arctic villages populated by hardy Ice Men, boldly eking out a living among the snow-capped peaks, glacial valleys, and vicious ice monsters. Higher yet,

where not even snow reaches because BrikWorld mountains don't mess around, small enclaves of Space Men cling to life in pressurized caves and special suits. Uses Dwarf, Icemen and Space material.

- **01:** In the great desert beyond the SkyWall, a race of terrible Machine Men toil constantly to their own ends. A Machine Man settlement most resembles an ant hive in social structure. In the center of things, organizationally speaking, is a giant complex capable of processing material into new drones and equipment, who spend the whole of their existence foraging and servicing the complex as it trundles across the desert in search of raw material. Picture a Spice Factory from Dune, or that big tank thing the Jawas drove. Kinda like that. Basic drones look flimsy and expendable, and they are. Heavier drones and warmechs do the actual fighting, but all share a common feature: at any distance from their home complex, their bodies rapidly degrade and they simply fall apart over a period of weeks. Should Machine Men encounter any living race, they're not above enslaving them and using them as cargo haulers. Uses Space, Droid and Mech material.
- **GenericFantasyLand:** Your typical fantasy Kingdom, filled with typical fantasy people doing typical fantasy things. Located in just about the middle of the subcontinent, in typical fantasy

fashion. In GenericFantasyland, stalwart warriors give their lives in defense of their homes. Powerful wizards erect towers for arcane purposes. Rogue necromancers stalk through catacombs, seeking fresh blood (so to speak) for their macabre armies. Small parties of brave adventurers roam the land, freeing prisoners, killing trolls, looting chests. Uses just about any set, with an emphasis on Castle material.

- **DragonLand:** Wedged between the Southern Swamp and the SkyWall, the lush forests of this nation have a long and difficult relationship with dragons. For whatever reason, there are more dragons in this small spot of land than anywhere else in the world. Virtually every town has a dragon lord who lands there on occasion, demanding tribute and virginal slaves to polish the tribute. In all fairness though the dragons DO keep the major threatening nuisances away, and the virgins don't have to be pretty ones. And there's never more than one dragon - dragons are fiercely territorial. The borders of DragonLand overlap considerably with that of its neighbors, especially the SkyWall federation, since dragons and dwarves both need caves for their respective purposes. Uses any material, so long as you bring dragons.
- **Bayoutopia:** Nowhere on BrikWorld is life quite so abundantly deadly as the southern delta. Life and death exist in a constant struggle, over which

the stoic residents of Bayoutopia pilot their crude watercraft while trying not to be noticed by the crocodiles, the giant insects, the dinosaurs, etc. Most of Bayoutopia's population is made up of Bayounik tribes and Dungan cults. The Bayounix are a peaceful, slightly primitive race, who live in bands of up to a few dozen families. Dungans take the opposite approach - they build massive earthen cities that attract the attention of predators from all over, and just deal with rebuilding again and again. Uses Bayounik and Dunganese material.

uncover more.

2.3 Life, Legos, and Everything

And so it came to pass as Khalid had foretold, that the touch of El'ezar came upon all of the land, and the dead walked the earth with the living, and the earth itself became filled with life. And the earth walked with the dead and the living.

2.2 BrikWorld Economy

Unlike many settings where every government creates their own money, the only coinage that has ever mattered in BrikWorld is Construction Points (CP). There have been alternatives suggested, the most successful being the Dungan Poo, but they've never achieved widespread usage. Even the Poo never managed to spread itself to non-Dungan hands.

Trade in BrikWorld usually takes the form of long-distance barter, for reasons we're about to get into. One trader might ship exotic beasts to the Bayounix, then return with Dungan slaves. Another trader might move elaborate SkyWall equipment such as rebreathers to the Archipelago, and return with large quantities of rope. Still others may have simpler routes: speedily bringing treasure from the edges of an empire to its heart, and returning with colonists to

Life itself is a primal force filling every nook and cranny of BrikWorld. In our world if you were to dig a cave into a hill and brick it up, the only life it will attract are teenagers who sneak in to drink, smoke pot and screw. Maybe a bear, if you're lucky. In BrikWorld, it could spawn *anything*.

Life is present in most or all other fantasy RPGs, just never acknowledged. Why are town sewers constantly filled with giant rats and spiders? Life. Why is there always a low-level dungeon just outside town? Life. Why is it that the farther from civilization you get, the bigger the nasties become? Life builds up. BrikWorld merely recognizes this phenomenon as fact.

Heisenbrik's discovery initiated a complete inversion of adventurer policy. A small band of plucky adventurers really couldn't solve problems that whole armies couldn't. Cutting an enemy off at the source would at best delay them a while; the ultimate

wellspring of enemy reinforcements was the enemy themselves.

Civilization began to view its enemies as infestations instead of challenges: only when every offending individual was excised would the problem be solved. Roaming adventurers became patrolling squads. Parties became platoons. Where villages and cities had been chipping out tiny niches for themselves, freshly-united nations cut whole swathes. A new age was dawning.

2.3.1 Breeders vs Monsters

Although all life can come from Life, not all of it does. Most individuals of what we know as player races come, in fact, from other individuals of those races in the usual fashion. As a result, these types of races are far more numerous than their accumulated Life would indicate, which will soon have larger implications. Said races, the “breeders,” are then forced to grow or scavenge food for their settlements and colonies.

In contrast, “Monster” races are primarily generated and directly sustained by Life. For example, though large Death Beetle hives often contain one or more Queens, said queens never lay more than four or so eggs at a time, a rate much too slow to replace losses to conflict. Likewise, though Death Beetles can and will prey on passing adventurers, and indeed their diet seems to consist primarily of unwary newbies, it’s nowhere near enough to feed the entire hive.

Monster races therefore tend to stabilize in numbers within a dungeon or isolated environment, becoming more powerful over time instead.

In crunchy game terms, a GM should use the breeder/monster designation of a race to determine what kind of challenge it represents. Breeder races will have large numbers of default cheap units, while monster races will be composed of a fewer number of elite units.

2.4 Loot: Phat and Otherwise

Then Mister Eadbert, he say, “I not be needing this all this stuff no more. You been good servant to Eadbert, you take. People ask you why you take, you say ‘No take, Mister Eadbert give.’”

Whereever there is Life, Loot inevitably follows. Call it treasure, quest reward or vendor trash, Loot is Life’s nonliving counterpart. Loot lags behind Life: *first* the monster spawns and *then* the treasure chests. Loot is dependent on Life: if the monsters in a dungeon are killed yet the dungeon is not looted, over a period of weeks the treasure will slowly degrade to match the current Life. Furthermore Loot growth, like Life, is exponential. If you leave a site undisturbed for one year, when cleared out it will provide substantially more bling than two sessions of looting it every six months.

The Life-Loot relationship quickly became

even more important to the Seven Nations of BrikWorld than Life itself. Sure, maybe knowing how tough something might be could help them get badass mounts, but it wasn't *stuff*. And the nations needed stuff. As they began to outbreed the monsters, they needed more tools and equipment than their Life provided on its own. Other breeder races were not only infestations, they were the competition.

A simple economy mostly-independently formed in each nation. The local authorities of each town managed a number of Life sites - dungeons/ruins/caves, etc. As the sites "ripened," detachments of the town guard would arrive to clean out the site and bring back the Loot. In the meantime they'd patrol the sites and roads in the town's care, fighting off bandits, poachers, and all kinds of monstery interference. In so doing, for the first time each town was able to prosper against the odds stacked against them.

With time the Wild, the never-tamed areas of raw, unfiltered Life existing (by definition) beyond the borders of civilization, began to be beaten back. Towns established safe routes between each other. Paths became roads, which became highways. Travelling merchants surviving by luck and guile became armed caravans succeeding by force, creating safe trade routes between locations. During the age of Taming, the world was domesticated one cleared dungeon at a time.

2.5 Loot: Crunch

The immediate and most important impact Loot will have on the players is as an unfortunate limitation: they can only have what they can use, and they can only use as many CP ("Construction Points" - BrikWars generic currency) as they're made of themselves. A rookie minifig costs 4 CP, which is enough to equip him with a two-handed weapon, two small weapons, a heavy weapon and shield or armor, or a small weapon with armor and a shield. Even if the party finds a +10 Vorpal Sword of Goddamn Awesome, if none of them are quite as awesome the sword will eventually degrade into a form more suitable for whoever is holding it.

On the other hand, the fact that Loot scales to Life means no challenge goes unrewarded, and no reward comes without challenge. To get that +10 Vorpal Sword the players must have waded through some grade A bullshit, and therefore more than likely CAN use the sword. Even if they couldn't, they could still sell the thing and buy an equivalent amount of usable weapons. The options are sell (quickly!) or use though - stashing loot and coming back for it later will accomplish exactly nothing, as nothing will be all that's left of it.

The other bright side is, during the Taming and the Struggle rookies are essentially free. The power bottleneck stems more from the need to equip the rookies, and train them into veteran soldiers and mages. Assuming you've got something for a rookie to swing, so long as you aren't stuck in the ass-end of

nowhere you should be able to get *someone* to use it. Recruits in the Wild era, on the other hand, come mostly in the form of quest rewards and rescued civilians; no sane minifigs are going to risk their necks voluntarily.

3 Races, Enemies, and All That Jazz

BrikWorld's races are a fairly diverse bunch:

3.1 Player Races

3.1.1 Minifigs

Minifigures, or Minifigs or Minis, can be considered the default player race. Notable for their roundish yellow heads and mostly-articulated limbs, minifigs can be found pretty much everywhere in BrikWorld.

Breeder: High

3.1.2 Trolls

Trolls, or Goblins, Orcs or Trow are something of a brother race to Minis. Outwardly their appearance is very similar to Minis, with roundish green heads instead of yellow. Historically they occupy the western highlands of WesternHighlandStan, but like Minis they can be found in small numbers pretty much everywhere. War

between Trolls and Minis is so common it's pretty much the assumed state.

Breeder: Very High

Troll card

3.1.3 Dorfs

This is a Dorf. She is made of beard and alcohol. All crafts dwarfship is of fine quality. She has been quite content lately. She admired a fine trap recently. She has been satisfied at work lately. She is a resident of the SkyWall mountain range. She likes Onyx, Steel, and cows for their haunting moos. She is often surly. She isn't given to flights of fancy. She needs alcohol to get through the working day. She likes working outdoors and grumbles only mildly at inclement weather.

Breeder: Medium

Breeder: N/A

Dorf card

3.1.4 Dungans

Dungans are occasionally described as the filth of the earth. This isn't fair to the filth, which Dungans happen to admire and worship. By nature Dungans are social and boisterous, shouting when they should whisper and stomping around where they should tread carefully. The natural marching order for Dungans is just behind the largest army they can follow; this nets them both a safe place in combat (Dungans are natural cowards) and plenty of worthwhile leavings. Dungans have a long and agglomerous history of building magnificently foetid tribal cities at secret locations in the worst bits of the southern swampland - and then inviting everyone they meet to join them there.

Breeder: Unfortunately high

3.1.5 Machine Men

The Machine Men of the Great Desert are without a doubt the most enigmatic of the BrikWorld races. Composed entirely of metal, each individual has only the merest spark of Life to sustain it. The race as a whole is forced to continually scavenge for Loot to repair themselves as their bodies degrade around them.

3.1.6 Bayounix

Like the Dungans, Bayounix are native to the swamplands of the south. Unlike the Dungans, they are worth a damn. Bayounix are BrikWorld's most resourceful race, making do with less and doing without for more. They farm what they can on what land they can in the swamp, use what they can find for as long as they can make it last, and generally just try to get through life by not being in anyone's way. Most Bayounik technology looks cobbled together from scraps, and it generally was. Bayounik equipment generally consists of only a mask and a weapon, both heavily enchanted to the limit of the user's CP.

Rumors occasionally surface that there is a subrace of giant Bayounik warriors living freely in the Wild in the depth of the swamps.

Bayounik card

Breeder: Average

3.2 Monster Races

Although players can incorporate monster races into their armies, most monsters will need to be tamed, enslaved, or will require some other method of control. Clear it with your GM first.

Most Monster races pack their own heat in the form of natural weapons and equipment, which can be looted as any weapon can and

details.

Zombie Stats

Skeleton Stats

3.2.1 Death Beetles

Death Beetles live underground in twisty hive warrens. An average Death Beetle is about the size of a minifig, and possesses dangerous natural weapons.

Death Beetles (4 CP)

Skill	1d6
Move	4"
Armor	1d10

Natural Equipment

Two 1" Weapons (2 CP each)

3.2.2 Undead

Life can be a tenacious thing. It doesn't like dying. Sometimes, through mysticism, necromancy or sheer bloody mindedness, life sticks around in the form of undead. The undead are alive but lack Life to stave off their deterioration, and so must continually devour life to stay afloat, a strange inversion of the Life-Loot relationship. Undead never heal, only decay slower, so the life of any undead at best begins as a zombie and ends a skeleton.

The predatory instincts of undead can be temporarily tamed in the presence of a trained necromancer. See Magic system for

3.2.3 Dragons

Dragons are an intriguing race with a very unique psychology. Were they more sociable they might have been a player race, but dragons are individualistic and yet fiercely competitive. Not really party material. It's worth going into a little more detail about dragons' packrat instincts, which will prove useful later.

Dragons and Hoarding

Dragons are famed for collecting Loot, even though they can't actually do anything with it. They just gather it, pile it up in their caves, and then they friggin' sit on it until someone comes around to kill them. Why do they bother with this?

In a word, sex. All dragons prefer to be on top.

Dragons live a very long time, over which they grow several orders of magnitude more powerful. If two dragons were to get into a fight over mating or any other power struggle, one of them would probably die very quickly and like as not neither dragon knows which it is beforehand. If both dragons maintain giant piles of Loot (capped by their Life), it becomes easier and much safer to gauge each other's

strength. If the other dragon's hoard is much bigger than yours, he can probably kick your ass nine ways to Sunday. If yours is bigger, invite him over for tea, let him get a look at *your* stash, and then tell him what you want him to do.

Because of the wide variety of dragons in BrikWorld, we're not going to bother with stats. When you get a model, work out what it ought to be worth in CP according to BrikWars creation rules.

3.2.4 Aberrations

Life is not always picky enough to stick with a single race. Multi-origin creatures, so-called "aberrations," are among BrikWorld's most terrifying and disturbing residents. They may be dumb or intelligent, harmless or deadly, and anything in between.

4 The Geography and Sociopolitical Layout of BrikWorld

Figure: BrikWorld during the Wild

During the Wild, BrikWorld nations are not so much nations as loose townships grouped by common culture, barely staving off the predations of the world at large.

By far the safest nation is that of the coastal

archipelago, which was able to tame its small islands to create safe places for minis to exist. The problem was getting there without being eaten by sea monsters or worse.

Figure: BrikWorld during the Taming

Figure: BrikWorld during the Struggle

Once the Wild was won, the flow of the most powerful items slowed to a trickle, and eventually stopped completely. Control of the now-artifacts became a hotly-contested issue, eventually escalating to a kind of cold war. All nations continued to farm their own dungeons for mid-high level treasure, while simultaneously poaching other nations' highest-level dungeons and sending spies

5 FFS, Get to the Actual Game Already

Despite the complexity of the setting, the structure of a BrikWorld game is fairly simple: get a quest/goal, kill stuff, loot/get rewarded, upgrade forces. Standard RPG fare.

5.1 Get a Quest and Kill Stuff

Questing is one of the most common elements in RPGs. Anyone who's played a computer RPG should be more than familiar with how they work. Brief

summary: “Go get ye flask.” “Okay, here is ye flask.” “Take this reward for getting ye flask.” Pretty vanilla stuff.

BrikWorld uses BrikWars for its combat system. Detailed rules already exist at www.BrikWars.com, and are an entertaining read in their own right. So we’re mostly going to skip over them too.

One addition we’d like to contribute to standard BrikWars combat is a simple XP system. In each encounter, a unit which distinguishes itself in combat via Heroic deeds can (at the discretion of the GM) be given an extra Life CP after the battle. Acts of bravery constituting Heroism include dispatching an enemy worth more CP than the unit in single combat, charging into battle to rescue a fallen comrade, holding off a stronger force until reinforcements can arrive, etc.

Heroic CP doesn’t contribute to a unit’s abilities or how much Loot the unit can carry until it’s been spent on upgrades (see: *Upgrading Your Forces*). However, if the unit takes lethal damage and happens to have a spare Heroic CP, it can burn the CP to survive. Therefore, keeping a spare CP or two around for emergencies is not a terrible idea.

5.2 Get Money

A BrikWorld party accrues wealth in two principle ways: by receiving it as a quest reward, and by taking it in the form of Loot. The first manner is identical to how quest

rewards work in just about any RPG, but the latter deserves a little elaboration.

5.2.1 Loot is Temporary

It’s very probable that the players will always have Loot CP equal to or very near their Life CP, even before entering a dungeon. There’s always a need for more equipment or a bigger sword. Any loot they’re carrying over the max will begin to degrade as soon as they leave for town again. The half-life for loot degradation is about one week. This means that each week, the extra Loot CP will halve. For example, say a party of 100 Life CP leaves a dungeon carrying 180 CP of Loot. If town is two weeks away, they will arrive with 120 CP of Loot. A surplus of 80 becomes a surplus of 40, then a surplus of 20.

In order to meet this loss the players should decide which pieces of equipment to downgrade or destroy, but the GM gets to decide (if she wants) how any downgrades happen. The players can also hire out a number of baggage handlers at a rate of 1 CP per two weeks. Each handler can carry back 8 CP of Loot.

5.2.2 Loot is Taxable

BrikWorld is as familiar with taxes as it is with death. Some nations call it taxing, for others it’s “salvage fees” or “mandatory voluntary donations.” It all amounts to the same thing - you’re rich, they’re not rich

enough, so they're going to do something about it. The exact tax rate is up to the GM and will probably depend on how well the players fight, but there are some minor guidelines.

The period with the highest taxes is the Taming. During the Wild towns focused more on keeping their people alive, demanding Loot from the players only as compensation and donations. On the other hand, players will probably have to bribe replacements with Loot CP. During the Struggle taxes of raw CP are equally low (maybe 25%), but governments will occasionally confiscate exceptionally cool weapons and conscript trained troops. During the Taming, though, what towns and cities need more than anything is sheer mass of equipment. To get it they charge obscene rates (75%ish) for permission to delve their dungeons, and they can predict almost exactly how much CP the players ought to be able to Loot. No, as a matter of fact they *don't* care that you weren't able to find all of the hidden chests. They were there, and probably aren't anymore, so pay up. If you want non-taxed income there's still some Wild left.

As in the real world, larger cities tend to have higher tax rates but offer more services in return compared to towns or villages. Cities have a larger supply of rookie adventurers willing to join up for less equipment. Cities tend to have more powerful mages, with higher caps on upgrades and abilities. Cities often have dedicated special-use trainers like pilots and healers, who would otherwise have been forced to generalize.

5.3 Upgrading Your Forces

Assuming the players have any CP left over from the previous section, this is where they can spend it.

5.3.1 Upgrading Units

After a unit has accrued at least one Heroic CP, it can convert it in town or other places of safety into an upgrade for its abilities. Through meditation, intense training and enough steroids to try out for the MBA, minifigs can empower themselves according to BrikWars custom creation rules. They need no more aid than the accumulated CP for the upgrade.

Sometimes, however, a mini needs a little more oomph than simple stat increases can provide. Two later sections: Specialization and Magic, detail additional means of leveling.

5.3.2 Upgrading Equipment

8 Campaigning

How a BrikWorld campaign is organized depends on time period it's set in:

- **Wild:** A Wild setting most resembles conventional fantasy RPGs. The PCs are the only ones with the freedom to move about. Everyone else is desperately needed for village defense. On the bright side, the PCs don't need to travel far at all to find something worth killing. Of course, since this is the Wild, the thing they find might well kill them right back. Treasure is plentiful but troop replacements are dear. Consider letting your players bribe the townsfolk into joining you at equal CP costs: 4 CP of loot per

rookie.

Wild quests should involve small-scale defense issues: death beetles in the farmland, a small dragon threatening outlying farmers, lost heirlooms, that kind of thing. A campaign revolving around securing and protecting a single town is perfect for a Wild setting.

Taxes are low in Wild settings, as villages are more concerned with people than stuff. If the PCs manage to get their hands on some equipment that's better than they are, go ahead and let them use it for the week or two it remains uber.

- **Taming:** During the Taming, towns are linking up and growing in strength. Roads are reliable, but still not safe. What once were villages are now towns, bursting at the seams with people in search of personal wealth. Local authorities have begun to manage dungeons which the PCs can requisition, but must pay steep taxes to loot. Untaxed Wild still exists beyond the reaches of civilization, but is just as dangerous as ever.

Taming quests take place at a slightly larger scale than Wild quests. Roads will need clearing, merchants will need guarding, *everyone* thinks they know of some ancient treasure just out of reach. Foreigners and other breeder races occasionally contact towns for trade or ransom. Peace may need to be made between adjacent towns squabbling over dungeon rights. Where Wild campaigns focus on sheer survival, Taming campaigns are all

about knitting together the disparate towns into a unified whole.

- **Struggle:** BrikWorld in the Struggle relies more on intrigue and deceit than sheer strength of numbers. Nations are fighting each other for the choicest loot (a bit like Mad Max) and are staving off all-out war by stockpiling powerful warriors wielding priceless artifacts, and by keeping other nations from knowing exactly how strong that really makes them (a bit like the Cold War). Additionally, the rising land of Archipelago and the united Dragon Empire tend to worry just about everyone.

Struggle quests generally gain from having a bit of a spy theme, and from fitting into the bigger picture. The players are almost certainly in the employ of some nation, and directed in the general vicinity of another. Their employers might send them to a town to discern how many of its residents are secretly Heroes, or to assassinate one, take whatever he's got and deliver it to a friendly Hero waiting just outside town. Or, they might shadow an enemy patrol group to mark the location of unpublished dungeons, then raid the dungeon and return with the loot as quickly as possible. Finally, if the players just want a simple dungeon crawl, Archipelago is still in the process of diving for treasures. This provides an additional challenge from being gimped by the need to equip rebreathers while fending off Lovecraftian monstrosities.

10 Miscellaneous Screeds

10.1 Roleplaying + Wargaming = Rollplaying

There is a great variety of roleplaying games available today. Virtually all of them encourage or enforce a strict interpretation of roleplaying on the part of the players, namely first-person extemporaneous acting in response to in-game events. Depending on the game this might only pertain to NPC interaction or might be the means by which every combat action is taken, but they all have it and they're all *serious* about it. The easiest way to troll any diverse group of roleplayers is to strike up a conversation about how much roleplaying is "enough." The word "rollplaying" itself arises from a common perjorative for people who are more interested in the combat and loot of the game than the narrative elements.

On the other side of the store, there's an equally wide variety of wargames. While each system likely has a great deal of fluff about the setting and armies involved, there's almost never any justification for the actual fighting players do beyond "my guys hate his guys," nor narrative impacts because of it. By far the most common persistent effects of a game are tournament standings and sour experiences, because wargames are also extremely competitive. If you ever want a greater appreciation of your gaming buddies, ask any diverse group of wargamers for their horror stories.

BrikWorld exists in an attempt to find a happy medium, a combination of the two styles that takes the best from each without giving in to their respective excesses. A story-driven RPG experience with combat-heavy wargaming mechanics. A true rollplaying game.
